## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claim 1 (currently amended). A <u>wall</u> trim member for decorating an architectural structure, said trim member comprising:

an elongated border constructed of a supple material, said border having

a front side having a decorative appearance, and

a back side opposite said front side, and

a plurality of overlapping layers, a first of said layers being positioned over a second of said layers to at least partially expose said second layer beneath said first layer when viewed from the front side of the border; and

a releasable fastener positioned on said back side of said border, said releasable fastener being one portion a complementary fastener system.

Claim 2 (original). The trim member of claim 1, wherein said releasable fastener comprises either a hook portion or a loop portion of a hook and loop fastener system.

Claim 3 (original). The trim member of claim 2, wherein said releasable fastener comprises an elongated strip extending along said border in its direction of elongation.

Claim 4 (canceled).

Claim 5 (original). The trim member of claim 1, wherein said supple material comprises cloth.

Claim 6 (original). The trim member of claim 1, wherein said supple material is capable of substantially conforming to a corner formed by substantially planar surfaces intersecting at substantially ninety degrees.

U.S. PATENT APPLICATION NO. 10/828,806 RESPONSE TO 15 SEPTEMBER 2006 OFFICE ACTION

Claim 7 (original). The trim member of claim 1, wherein said supple material is capable of substantially conforming to a ninety degree corner with a bend radius of less than one inch.

Claim 8 (original). The trim member of claim 1, wherein said supple material is capable of substantially conforming to a ninety degree corner with a bend radius of less than one inch without permanent deformation of said supple material.

Claim 9 (original). The trim member of claim 1, wherein said supple material is capable of substantially conforming to a ninety degree corner with a bend radius of less than one-half inch.

Claim 10 (original). The trim member of claim 1, wherein said supple material is capable of substantially conforming to a ninety degree corner with a bend radius of less than one-quarter inch.

Claim 11 (original). The trim member of claim 1, wherein said supple material comprises a material selected from the group consisting of acetate, vinyl, paper, acrylic, silk, lace and felt.

Claim 12 (canceled).

3

Claim 13 (currently amended). A trim kit for decorating an architectural structure, said trim kit comprising; a <u>wall</u> trim member-said trim member comprising;

an elongated border constructed of a supple material, said trim having border including

- a front side having a decorative appearance, and
- a back side opposite said decorative side, and
- a plurality of overlapping layers, a first of said layers being positioned over a second of said layers to at least partially reveal said second layer beneath said first layer when viewed from the front side of the border: and
- a releasable fastener positioned on said back side of said border, said releasable fastener being one portion a complementary fastener system; and
- a complementary releasable fastener mountable to the structure, said complementary releasable fastener being matable with said releasable fastener for attaching said trim member.

Claim 14 (original). The trim kit of claim 13, wherein said releasable fastener comprises an elongated strip extending along said border in its direction of elongation, and wherein said complementary releasable fastener comprises a plurality of discrete fasteners.

Claim 15 (original). The trim kit of claim 14, wherein said elongated strip comprises one portion of hook and loop portions of a hook and loop fastener system, and wherein each of said plurality of discrete fasteners comprises another portion of the hook and loop portions of the hook and loop fastener system.

Claim 16 (original). The trim kit of claim 15, wherein each of said plurality of discrete fasteners comprises a pressure sensitive adhesive backing covered by a release sheet peelably removable to expose said pressure sensitive adhesive backing.

Claim 17 (original). The trim kit of claim 15, wherein each of said plurality of discrete fasteners defines an internal opening for admitting passage therethrough of a mechanical fastener.

Claim 18 (original). The trim kit of claim 13, further comprising a second trim member comprising a second elongated border constructed of supple material, said second border having a respective front side having a respective decorative appearance, and a respective back side opposite said respective front side, said front sides of said first and second borders providing visually distinct decorative appearances.

Claim 19 (currently amended). A method for decorating an architectural structure having a wall, said method comprising:

providing a <u>wall</u> trim member comprising[[:]] an elongated border constructed of a supple material, said border having a front side having a decorative appearance, and a back side opposite said front side; and a releasable fastener positioned on said back side of said border, said releasable fastener being one portion a complementary fastener system;

providing a complementary releasable fastener matable with said releasable fastener for attaching said trim member;

attaching said complementary releasable fastener to the wall; and
mating said releasable fastener of said trim member to said complementary releasable
fastener to attach said trim member to the wall.

Claim 20 (original). The method of claim 19, wherein said architectural structure comprises a second wall intersecting said first wall to form a corner, said method further comprising: attaching said complementary releasable fastener to the second wall; bending said trim member to substantially conform to the corner; and mating said releasable fastener of said trim member to said complementary releasable fastener to attach said trim member to the second wall.

Claim 21 (original). The method of claim 19, further comprising: unmating said releasable fastener of said trim member from said complementary releasable fastener to remove said trim member from the wall; and providing a second trim member comprising a second elongated border constructed of supple material, said second border having a respective front side having respective decorative appearance, and a respective back side opposite said respective front side, said front sides of said first and second borders providing visually distinct decorative appearances; and mating said releasable fastener of said second trim member to said complementary releasable fastener to attach said trim member to the wall.

Claim 22 (currently amended). A method for decorating an architectural structure having a wall, said method comprising:

providing a <u>wall</u> trim member comprising: an elongated border constructed of a supple material, said border having a front side having a decorative appearance, and a back side opposite said front side; and a releasable fastener positioned on said back side of said border, said releasable fastener being one portion a complementary fastener system;

providing a plurality of discrete complementary releasable fasteners matable with said releasable fastener:

attaching said plurality of discrete complementary releasable fasteners to the wall; and mating said releasable fastener of said trim member to said plurality of discrete complementary releasable fasteners to attach said trim member to the wall.

Claim 23 (new). The trim member of claim 1, wherein the first layer comprises a first material and the second layer comprises a second material different from the first material.

Claim 24 (new). The trim kit of claim 13, wherein the first layer comprises a first material and the second layer comprises a second material different from the first material.
